

Baseline product line

Hub 2 (2G) Jeweller

Security system control panel with 3 communication channels: Ethernet and 2 SIM cards (2G). Supports **photo verification** provided by detectors of the MotionCam series.

Free over-the-air software updates

Integration with third-party CCTV cameras or DVRs

Connection to CMS

Informing users with push notifications, calls, and SMS

Always online

To guarantee timely alarm transmission to the security company and users, Hub 2 supports connection to three Internet providers simultaneously: via **Ethernet** and **two SIM cards with a 2G cellular network**. Communication channels operate in parallel, and automatic switching between them takes seconds.

The Ajax product portfolio includes Hub 2 with a 4G cellular modem. This version supports 2G, 3G, and LTE cellular networks. Please note that 2G/3G networks have been shut down in some regions or are planned to be disabled soon.

In-app control and configuration

Hub is connected to Ajax apps, security companies, and users via a secure channel through the Ajax Cloud server located in several AWS data centres. Server availability is 99.995%.

Intuitive Ajax apps provide remote configuration and all information about system devices from anywhere the Internet is available, on a smartphone or PC. An installer can remotely change the settings and provide services in time – no need to visit the object.

Sabotage-resistant

- Built-in backup battery giving up to 16 hours of autonomous operation
- Detecting loss of connection with Ajax Cloud in 1 minute
- Detecting loss of connection with devices in 36 seconds
- Tamper alarm

Guaranteed delivery of alarms and photos

An Ajax system uses two-way secure radio communication based on **Jeweller** and **Wings** proprietary protocols. Radio protocols work in parallel and focus on their function, guaranteeing instant data delivery despite weak signal and communication interruptions.

Encrypted two-way radio communication

Automatic power adjustment of radio transmitters

Frequency hopping against radio interference and signal interception

Notifications about jamming and connection loss

Jeweller

transmits alarms, events, and all readings

- Up to 2,000 m of radio communication in an open space
- Encryption and device authentication to prevent spoofing
- Regular polling to display current devices' statuses

Hassle-free installation

The hub is ready to operate straight out of the box. There is no need to disassemble the enclosure during installation. With a SmartBracket panel, an installer can effortlessly mount the hub on the wall or ceilings. The installation kit with all the necessary fasteners is included in a complete set.

Wings

transmits photos and large data packages

- Up to 1,700 m of radio communication in an open space
- Unique uploading algorithm and data delivery confirmation
- Data backup and resend in case of transmission interruptions

Quick connection and setup

Firstly, an installer needs to plug the hub into a power socket, and connect it to the Internet via Ethernet and SIM cards. The next step is pairing with Ajax apps by scanning the hub's QR code or entering its ID manually. And lastly, an installer only needs to name the hub and add other Ajax devices.
